

Wires

Line wires are spaced for different stock types to provide maximum strength and security at the most needed points of contact. They are continuous inlength and made from high tensile wire.

The stay wires (vertical) are continuous in length. They combine with the knots and tension curves to create overall rigidity and elasticity. The load of any impact will spread and dissipate over the full fence height and for some distance on either side. The stay wires are standard available at 160 mm or 320 mm spacing for 90 cm height.
